Still growing... even in the face of Coronavirus!

2020 has been a year of unwanted, unforeseen and unprecedented challenges for each and every single one of us, with regard to both our working and personal lives.

Yet, even in the midst of the most troublesome and uncertain financial climate and industrial conditions many of us have experienced in our lifetimes, we at Turner & Coates have adapted our core offering and re-shaped our service provision, to grow our business... and gain some exciting new clients!

These include Canadian cement and concrete-related building materials giant, Lafarge.

Established in 1909, Ontariobased Lafarge - a key member of LafargeHolcim - manufactures and solely distributes specialist building materials, including portland cement, aggregates, hot-mix asphalt, concrete blocks and pipes and gypsum for both residential and commercial use.

Employing over 6,000 people across more than 400 sites throughout Canada - including quarries, plants and distribution facilities - Lafarge also benefits from a strong track record in the provision of asphalting and road construction services.

We are currently working with Lafarge on a new Kiln Cooler Vent Filter project at its Bath plant, which has seen us undertake inspections on individual filter parts, equipment and components being fabricated both in Italy and Egypt.

These include the Bag Filter - incorporating the support structure and stairs/ platform, the Heat Exchanger and tube bundles, all access platforms around the dust handling conveyors, the fan and its stack platform, and the overall support structures for both the roof ducts and drop-out chamber.

The majority of the above equipment and components were fabricated in the shop in Egypt - apart from the tube bundles which were made at Redecam in Italy.

In addition to full site inspections in both countries, we also oversaw the shipment of equipment from

A flagbearing organisation: Lafarge is Canada's largest provider of sustainable construction materials.

Italy, including final inspections, packing checks, and confirmation of packing lists.

"This is a very exciting new partnership for us," concludes Managing Director of Turner & Coates, Neil Coulborn. "The Kiln Cooler Vent Filter at its Bath plant is a key project for Lafarge, and to be contracted to provide full inspection and expediting services - both physical and virtual - is testament to our superb, core team of professionals, and wider network of tried-and-trusted inspectors in Southern Europe."
