Working towards a cleaner, greener tomorrow!

Transition to net zero is crucial to the long-term future of our planet. Achieving it in less than three decades however, is a colossal challenge and it's vital that we all play a full and responsible role.

Measurable excellence in all aspects of environmental management is a legal duty of today's businesses, no matter what they do, or where they are located in the world.

Turner & Coates is one of the most experienced and trusted Management Systems Specialists serving global industry. We combine unparalleled customer service with a wealth of proven assessment and auditing expertise, across a broad range of internationally recognised and applied standards, including ISO 14001 and ISO 50001.

ISO 14001 - Helping global industry to act responsibly

The single biggest environmental management standard worldwide, ISO 14001 provides businesses and organisations everywhere with a totally systematic approach to achieving and upholding their 'green' missions and obligations, whilst minimising the ecological impact of their day-to-day working practices and procedures.

Similar to ISO 9000 family of Quality Management standards, in that it applies to a business as a whole rather than to the product itself, ISO 14001 follows the established 'Plan-Do-Check-Act' methodology of the ISO 9001 standard. It actively encourages and stimulates positive, productive communication with all relevant parties including employees, contractors, neighbours and regulatory authorities.

Here at Turner & Coates, our expertise and experience in the implementation and certification of ISO 14001 is second to none, and we can help to ensure you're ready to take on your responsibilities in this all-important area.

ISO 50001 - Helping drive change in global energy management

The main component of ISO 50001 is a realistic and targeted Energy Action Plan, tailored to the precise needs, frameworks and procedures of the business or organisation concerned.

Modelled on both the ISO 9001 and ISO 14001 systems, ISO 50001 is a fully auditable system focused on how companies manage their key data and documentation, whilst helping them to control and reduce their energy usage. It aims to help companies across the globe reduce their reliance on fossil fuels (with a view to eliminating them altogether), substantially cut their energy costs and adopt a proactive, responsible approach to cutting greenhouse gas emissions, in line with pan-industry targets towards achieving net zero by 2050.

Here at Turner & Coates, we are dedicated to helping clients achieve full ISO 50001 compliance and certification. This includes everything from identifying areas of a business that would benefit from energy efficiency measures, to helping ensure that the targets and objectives set are SMART; Specific, Measurable, Achievable, Realistic and Time-bound.

Laying the groundwork for success

Our experienced, qualified team of Management Systems Consultants consultants are comfortable working across a diverse range of industries, to help you follow a systematic approach to realising ongoing measurable improvements in your organisation's energy efficiency, usage and security.

Should you wish, we can also carry out a range of audit, inspection and assessment services to help you ensure your suppliers are complying with your standards, by acting as an independent and impartial third party.
